

Science

The aim of the study of Science during Junior Secondary is to provide a foundational base on which students may build their scientific knowledge in the senior years of schooling. In conjunction with the theory component of each unit, students will have numerous opportunities to engage in practical experiments to further embed and extend their understanding and curiosity of the scientific world.

With constant advancements and discoveries in the scientific world, the opportunities which exist for students to discover through the study of Physics, Biology and Chemistry in the Senior School are exciting and endless.
